

DESIGNED TO WORK...

... BUILT TO LAST

Ambassador Buildings

This stylish and popular timber building has a pleasing asymmetrical appearance, due to the distinctive off-centre ridge line. This tried and tested feature provides extra eaves height at the front, making the Ambassador a highly versatile, elegant and practical building.

Each building is made to your specification and layout requirements. We can provide the necessary elevation drawings for planning applications and base drawings for your builder. Two heights are available our standard 8' (front) / 6' (rear) eaves height and our classic 9'6" (front) / 7'6" (rear) eaves. Other heights can be quoted for on request.

Construction

External sections are solidly built of 4" x 2" nominal timber framework clad with 3/4" finished thickness pressure treated timber shiplap boarding or rustic style 8" deep featheredge boarding. Optional internal partitions are constructed of similar framework and clad on one side to full height with 3/4" finished thickness square edged t&g boarding.

Roofing & Rainwater Goods

Maintenance-free and easy-to-handle natural grey corrugated fibre cement roof sheets are used as standard. Rooflights can be supplied to provide natural light. Coloured fibre cement roofs are also available. Deepstyle pvc gutters to both front and rear eaves are included, complete with downpipes and shoes.

Fronts

Front sections are optional and largely depend on the use for which the building is intended. Options include:

standard fronts - constructed as external sections.

general purpose fronts - complete with timber personnel door and glazed window.

stable fronts - complete with a robust 4' wide half heck stable door and stable window.

Doors & Gates

We offer a range of doors and gates to enable you to optimise the internal layout of your building. These include hinged double doors, stable doors, sliding doors, timber field gates, steel stockyard and sheeted gates.
